

LED Power adapter installation:

1. Power off and open the Lighting fixture
2. Check the lighting fixture have the Electronic Ballast and starter or not

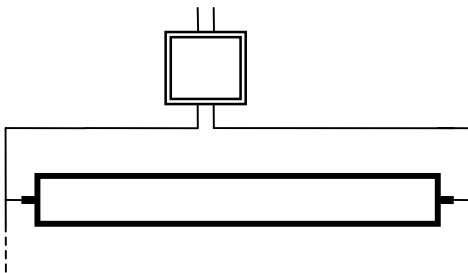

3. Remove or short the Electronic Ballast and remove the starter

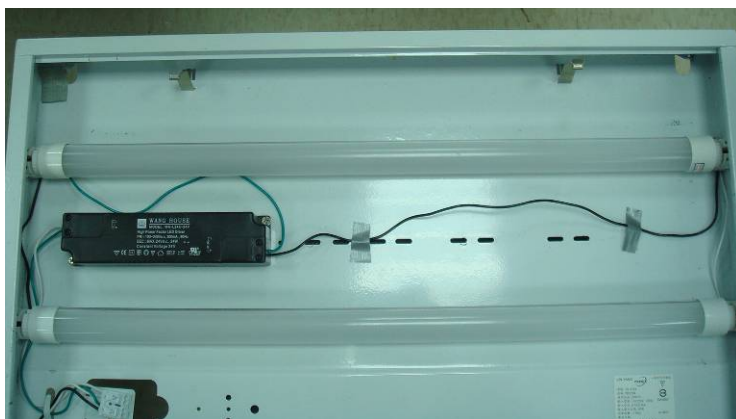

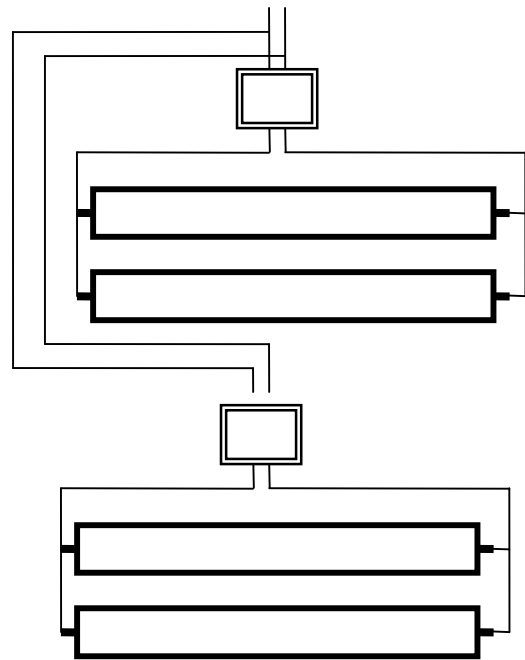

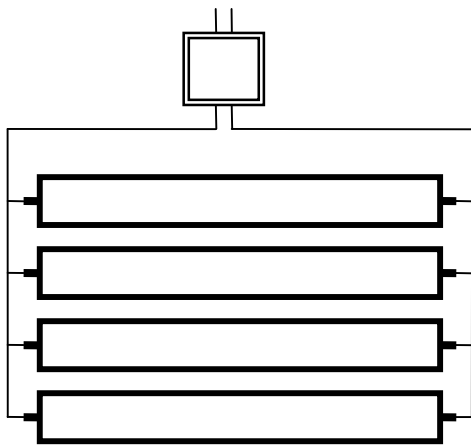

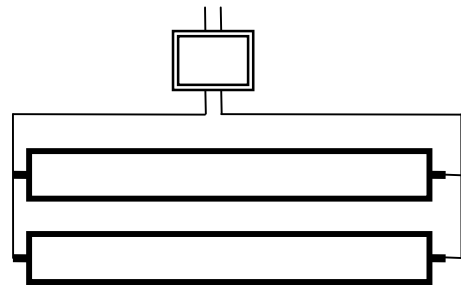

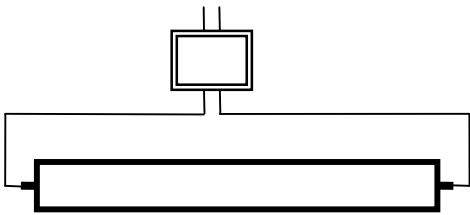

4. Install the power adapter before LED Tube installation:

➔ Please evaluate the power consumption for the lighting fixture, ex.: one 2ft LED Tube need 10 watt at least, so you can buy the power adapter 12W in the market, 2 tubes will be 24W, 3 tubes need 36W, 4 tubes need 48W...

5. Connect the 24Vdc output to LED Tube socket (1 to 2~4 → Parallel)

6. Close the fixture and power on to test your installation

7. Setup lighting fixture to your room and turn on your power again.
